

***Our Unique Comprehensive
Treatment Program
Addresses All 3 Damaged
Areas of Your Nerves***

1. Increase the Blood Flow to Your Limbs and Heal the Nerves.

Blood Flow restored with new LED Therapy, an FDA Cleared Neurolight Therapy.

2. Electroanalgesia to Rehabilitate the Nerves.

Nerve Function is restored with innovative patented treatment used to repair nerve responses.

3. The Foods You Eat Could be Making Your Pain and Inflammation Worse.

Certain foods cause inflammation and damage to your nerves. Proper nutrition can greatly reduce your Neuropathy symptoms.

***UNDERSTANDING
PERIPHERAL
NEUROPATHY***

WHO WE HELP

According to the National Institute of Health (NIH) there are **20 million Americans** experiencing problems with Neuropathy.

You may be suffering from the debilitating symptoms of Neuropathy in your feet and/or hands

THESE INCLUDE:

- **Burning Pain**
- **Numbness**
- **Loss of Sensation**
- **Tingling**
- **Cramping**
- **Sharp Shooting Pain**
- **Skin Sensitive to Touch**
- **Instability and Unsteadiness (Balance)**

Neuropathy generally starts with one symptom, such as numbness or balance problems. Because it is a progressive, degenerative condition, eventually the Neuropathy patient suffers from most or all of the afore mentioned symptoms, significantly reducing their quality of life.

If you are now suffering from Peripheral Neuropathy you are not alone.

There are over 100 causes of Peripheral Neuropathy. Diabetes is the # 1 cause of Peripheral Neuropathy. Other causes include: complications from surgery, chemotherapy, pre-diabetes, circulatory issues, autoimmune disorders, and many more.

COMPREHENSIVE TREATMENT APPROACH

Neuropathy occurs because the blood vessels that supply the nerves in the legs, feet, and hands become damaged.

1. CREATION OF NEW BLOOD VESSELS

Our body naturally produces new blood vessels with a process known as "ANGIOGENESIS."

The pictures above display research showing the use of specific LED Therapy: vessels (BEFORE) were stimulated to grow new blood vessels (AFTER) thereby increasing blood flow. This new, increased blood flow is the first step in allowing your degenerating nerves to heal.

NEUROLIGHT THERAPY

**FDA cleared to increase circulation & decrease pain*

2. ELECTROANALGESIA

The affected nerves of the feet and legs become damaged and begin to mis-fire, like a short circuiting wire. Standard physical therapy equipment such as a TENS unit is designed to reduce pain, but doesn't change the ongoing damage. Unfortunately, these types of treatments are only temporary, so the patient continues to suffer.

VS

Our program uses state of the art nerve technology from Germany. It is completely different from typical physical therapy modalities you may have seen. This form of nerve stimulation changes how the nerve fires, thereby helping the nerves heal and block pain signals.

3. INFLAMMATION

Reducing inflammation throughout the body is a key step of our unique protocol.

Inflammation from diet and environmental toxins can damage the blood vessels that are responsible for bringing oxygen and nutrients to the nerves in your feet and hands, therefore causing the symptoms of Neuropathy.

By increasing the intake of certain healthy foods and reducing the consumption of specific damaging foods, our program works to decrease inflammation resulting in improved circulation to the feet and hands.
